-!- CATALYTIC ACTIVITY: ATP + GMP = ADP + GDP.
-!- SUBUNIT: Monomer (By similarity).
-!- SIMILARITY: Belongs to the guanylate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100.0%; Score 25; DB 1; Lk

                                                                                                                               human and mouse cDNA sequences.";

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Essential for recycling GMP and indirectly, cGMP.

-!- CATALYITC ACTIVITY: ATP + dFMP + GDP.

-!- SUBUNIT: Monomer (By similarity).

-!- SUBUNITY: Belongs to the guanylate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 196;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transferace; Kinase; ATP-binding; Acetylation.

Biol. Chem. 271:16734-16740(1996).
-!- FUNCTION: Essential for recycling GMP and indirectly, cGMP.
-!- CATALYTICA ACTIVITY: ATP. + GMP = ADP + GDP.
-!- SUBDNIT: Monomer (By similarity).
-!- SIMILARITY: Belongs to the guanylate kinase family.

GENERAL INFORMATION:
APPLICANT: Samuel Davis, Nicholas W. Gale, George D. Yancopoulos, and
APPLICANT: Neil Stahl
TITLE OF INVENTION: METHOD OF ENHANCING THE BIOLOGICAL ACTIVITY OF LIGANDS
FILE REFERENCE: REG 670-A-US
CURRENT APPLICATION NUMBER: US/09/868,677
CURRENT PILING DATE: 2002-02-08
PRIOR FILING DATE: 1999-12-23
PRIOR FILING DATE: 1999-12-23
PRIOR FILING DATE: 1998-12-23
Sequence 2, Application US/07884495
GENERAL INFORMATION:
APPLICANT: Tan, Paris Som Tjwan
APPLICANT: Tan, Paris Som Tjwan
APPLICANT: Tan, Paris Som Tjwan
APPLICANT: Maings, Wilhelmus Nicolaas
ITILE OF INVENTION: PROTEIN FROM LACTIC ACID BACTERIA
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Cooper & Dunham
STREET: 30 Rockefeller Plaza
CITY: New York
COUNTRY: New York
COUNTRY: United States of America
ITILIANTED: DOILS
ITILIANTED:

Microbiol. 152, 335-341, 1989 A;Title: Homology and distribution of CO dehydrogenase structural genes in carboxydotroph A;Reference number: PL0138; MUID:90055678; PMID:2818128 A;Accession: PL0140 A;Accession: PL0140 A;Accession: PL0140 A;Accession: Carbon-monoxide dehydrogenase consists of three polypeptide chains: large, mec C;Comment: Carbon-monoxide dehydrogenase consists of three polypeptide chains: large, mec C;Keywords: oxidoreductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              starvation-induced ribonuclease - tomato
Cispecies: Lycopersicon esculentum (tomato)
Cipacies: Lycopersicon esculentum (tomato)
Cipacession: 853508
